# TEST REPORT IEC 62471 Photobiological safety of lamps and lamp systems

Report Reference No. ..... GLESO10030108401

Tested by (name + signature).....: Bica Chen

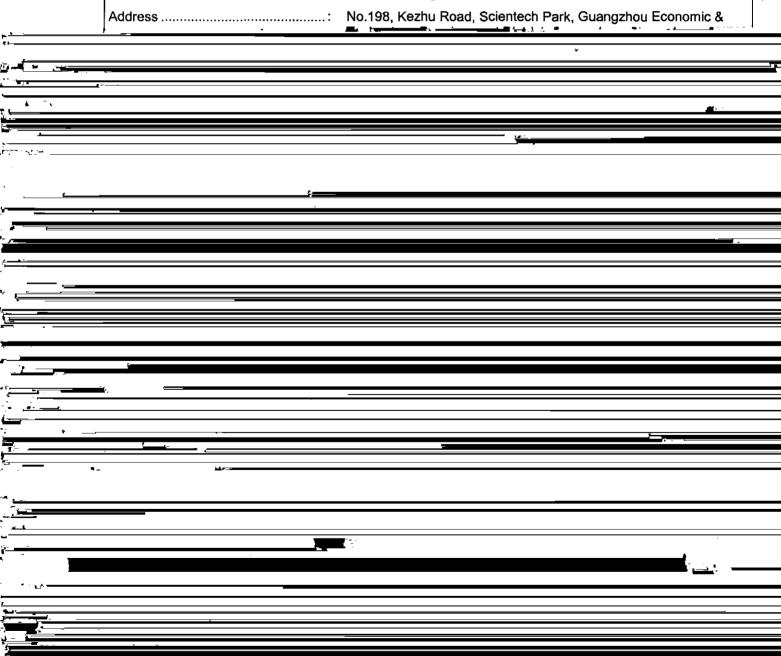

Approved by (name + signature).....: Ryan Li

Date of issue ...... April 13, 2010

Total number of pages ...... 14 pages

Testing Laboratory.....: SGS-CSTC Standards Technical Services Co., Ltd. GuangZhou

**Branch Testing Center** 

#### Summary of testing:

## Tests performed (name of test and test clause):

These tests fulfil the requirements of standard ISO/IEC 17025.

When determining the test conclusion, the Measurement Uncertainty of test has been considered.

Due to the physical properties of the Lamp, this product does not contain any radiation above 800nm. Therefore the measured spectral range has been limited from 200nm up to and including 800nm.

Test was conducted under 20 mA.

### Testing location:

SGS-CSTC Standards Technical Services Co., Ltd. GuangZhou Branch Testing Center

Report No.: GLESO10030108401

No.198, Kezhu Road, Scientech Park, Guangzhou Economic & Technology Development District, Guangzhou, Guangdong, CHINA

Summary of compliance with National Differences	:

4	EXPOSURE LIMITS		
4.1	General		Р
	The exposure limits in this standard is not less than 0,01 ms and not more than any 8-hour period and should be used as guides in the control of exposure		Р
	Detailed spectral data of a light source are generally required only if the luminance of the source exceeds 10 <sup>4</sup> cd <sup>2</sup> m <sup>-2</sup>	see clause 4.3	Р
4.3	Hazard exposure limits		Р
4.3.1	Actinic UV hazard exposure limit for the skin and eye		Р
	The exposure limit for effective radiant exposure is 30 J·m <sup>-2</sup> within any 8-hour period		Р
	To protect against injury of the eye or skin from ultraviolet radiation exposure produced by a broadband source, the effective integrated spectral irradiance, E <sub>S</sub> , of the light source shall not exceed the levels defined by:		Р
	$E_{\rm e} \cdot t = \sum_{200 \cdot 3}^{400} \sum_{i} E_{\lambda}(\lambda, t) \cdot S_{\rm UV}(\lambda) \cdot \Delta t \cdot \Delta \lambda \le 30 \qquad \qquad \text{J-m}^{-2}$		Р
	The permissible time for exposure to ultraviolet radiation incident upon the unprotected eye or skin shall be computed by:		Р
	$t_{\text{max}} = \frac{30}{E_{\text{S}}}$ s		Р
4.3.2	Near-UV hazard exposure limit for eye		Р
	For the spectral region 315 nm to 400 nm (UV-A) the total radiant exposure to the eye shall not exceed 10000 J·m <sup>-2</sup> for exposure times less than 1000 s. For exposure times greater than 1000 s (approximately 16 minutes) the UV-A irradiance for the unprotected eye, E <sub>UVA</sub> , shall not exceed 10 W·m <sup>-2</sup> .		Р

The permissible time for exposure to ultraviolet radiation incident upon the unprotected eye for time less than 1000 s, shall be computed by:

	IEC 62471						
Clause	Requirement + Test Result – Remark	Verdict					
	$L_{\rm B} \cdot t = \sum_{300}^{700} \sum_{t} L_{\lambda}(\lambda, t) \cdot B(\lambda) \cdot \Delta t \cdot \Delta \lambda \le 10^6 \qquad \text{J} \cdot \text{m}^{-2} \cdot \text{sr}^{-1}  \text{for } t \le 10^4 \text{ s} \qquad t_{\rm max} = \frac{10^6}{L_{\rm B}}$	P					
	$L_{\rm B} = \sum_{300}^{700} L_{\lambda} \cdot B(\lambda) \cdot \Delta \lambda \le 100 \qquad \qquad W \cdot \text{m}^{-2} \cdot \text{sr}^{-1}$	N					
4.3.4	Retinal blue light hazard exposure limit - small source						
	Thus the spectral irradiance at the eye $E_{\lambda}$ , weighted against the blue-light hazard function $B(\lambda)$ shall not exceed the levels defined by:	N					
	$E_{B} \cdot t = \sum_{i=1}^{700} \sum_{k} E_{\lambda}(\lambda, t) \cdot B(\lambda) \cdot \Delta t \cdot \Delta \lambda \leq 100$	N					
	$E_{B} = \sum_{300}^{700} E_{\lambda} \cdot B(\lambda) \cdot \Delta \lambda \le 1 \qquad W \cdot m^{-2}$	N					
4.3.5	Retinal thermal hazard exposure limit	Р					
	To protect against retinal thermal injury, the integrated spectral radiance of the light source, $L_{\lambda}$ , weighted by the burn hazard weighting function $R(_{\lambda})$ (from Figure 4.2 and Table 4.2), i.e., the burn hazard weighted radiance, shall not exceed the levels defined by:	P					
	$L_{\text{R}} = \sum_{s=0}^{1400} 1400 \text{ (10 } \mu\text{s} \le t \le 10 \text{ s)}$	Р					
4.3.6	Retinal thermal hazard exposure limit – weak visual stimulus	N					
	For an infrared heat lamp or any near-infrared source where a weak visual stimulus is inadequate to activate the aversion response, the near infrared (780 nm to 1400 nm) radiance, L <sub>IR</sub> , as viewed by the eye for exposure times greater than 10 s shall be limited to:	N					
	$L_{IR} = \sum_{780}^{1400} L_{\lambda} \cdot R(\lambda) \cdot \Delta \lambda \le \frac{6000}{\alpha} \qquad \qquad W \cdot m^{-2} \cdot sr^{-1}$	N					
4.3.7	Infrared radiation hazard exposure limits for the eye	N					
	The avoid thermal injury of the cornea and possible delayed effects upon the lens of the eye (cataractogenesis), ocular exposure to infrared radiation, E <sub>IR</sub> , over the wavelength range 780 nm to 3000 nm, for times less than 1000 s, shall not exceed:	N					
		N					
	For times greater than 1000 s the limit becomes:	N					

	IEC 62471		
Clause	Requirement + Test	Result – Remark	Verdict
	$E_{\rm IR} = \sum_{780}^{3000} E_{\lambda} \cdot \Delta \lambda \le 100$ W · m <sup>-2</sup>		N
4.3.8	Thermal hazard exposure limit for the skin	•	N
	Visible and infrared radiant exposure (380 nm to 3000 nm) of the skin shall be limited to:		N
	$E_{H} \cdot t = \sum_{380}^{3000} \sum_{t} E_{\lambda}(\lambda, t) \cdot \Delta t \cdot \Delta \lambda \le 20000 \cdot t^{0,25}$ J·m <sup>-2</sup>		N
			<u> </u>
5	MEASUREMENT OF LAMPS AND LAMP SYSTEM	<u>IS</u>	
5.1	Measurement conditions	<u> </u>	Р
	Measurement conditions shall be reported as part of the evaluation against the exposure limits and the assignment of risk classification.		P
5.1.1	Lamp ageing (seasoning)		N
	Seasoning of lamps shall be done as stated in the appropriate IEC lamp standard.		N
5.1.2	Test environment		Р
	For specific test conditions, see the appropriate IEC lamp standard or in absence of such standards, the appropriate national standards or manufacturer's recommendations.		Р
5.1.3	Extraneous radiation		Р
	Careful checks should be made to ensure that extraneous sources of radiation and reflections do not add significantly to the measurement results.		Р
5.1.4	Lamp operation		Р
	Operation of the test lamp shall be provided in accordance with:		Р
	<ul> <li>the appropriate IEC lamp standard, or</li> </ul>		Ν
	<ul> <li>the manufacturer's recommendation</li> </ul>		Р
5.1.5	Lamp system operation		Р
	The power source for operation of the test lamp shal be provided in accordance with:		Р
	<ul> <li>the appropriate IEC standard, or</li> </ul>		N
	- the manufacturer's recommendation		Р
5.2	Measurement procedure		Р
5.2.1	Irradiance measurements		Р
	Minimum aperture diameter 7mm.		Р
	Maximum aperture diameter 50 mm.		Р

Clause Requirement + Test Result - Remark						
	The measurement shall be made in that position of the beam giving the maximum reading.		Р			
	The measurement instrument is adequate calibrated	·	P			

**IEC 62471** Clause Requirement + Test Result - Remark Verdict for lamps intended for general lighting service, N the hazard values shall be reported as either irradiance or radiance values at a distance which produces an illuminance of 500 lux, but not at a distance less than 200 mm for all other light sources, including pulsed lamp Р sources, the hazard values shall be reported at a distance of 200 mm 6.1 Ρ Continuous wave lamps 6.1.1 **Exempt Group** Ρ Р In the exempt group are lamps, which does not pose any photobiological hazard. The requirement is met by any lamp that does not pose: an actinic ultraviolet hazard (E<sub>S</sub>) within 8-hours Ρ exposure (30000 s), nor Р a near-UV hazard (E<sub>UVA</sub>) within 1000 s, (about 16 min), nor Р a retinal blue-light hazard (L<sub>B</sub>) within 10000 s (about 2,8 h), nor Ρ a retinal thermal hazard (L<sub>R</sub>) within 10 s, nor an infrared radiation hazard for the eye (EIR) Ν within 1000 s 6.1.2 Risk Group 1 (Low-Risk) Ν In this group are lamps, which exceeds the limits for N the exempt group but that does not pose: an actinic ultraviolet hazard (Es) within 10000 s, Ν a near ultraviolet hazard (E<sub>UVA</sub>) within 300 s, nor Ν a retinal blue-light hazard (LB) within 100 s, nor Ν a retinal thermal hazard (LR) within 10 s, nor Ν an infrared radiation hazard for the eye (E<sub>IR</sub>) Ν within 100 s Lamps that emit infrared radiation without a strong Ν visual stimulus and do not pose a near-infrared retinal hazard (L<sub>IR</sub>), within 100 s are in Risk Group 1. 6.1.3 Risk Group 2 (Moderate-Risk) Ν This requirement is met by any lamp that exceeds Ν the limits for Risk Group 1, but that does not pose: an actinic ultraviolet hazard (Es) within 1000 s Ν exposure, nor a near ultraviolet hazard (E<sub>UVA</sub>) within 100 s, nor Ν a retinal blue-light hazard (LB) within 0,25 s Ν (aversion response), nor

**IEC 62471** Clause Requirement + Test Result - Remark Verdict a retinal thermal hazard (LR) within 0,25 s (aver-Ν sion response), nor an infrared radiation hazard for the eye (E<sub>IR</sub>) Ν within 10 s Lamps that emit infrared radiation without a strong Ν visual stimulus and do not pose a near-infrared retinal hazard (L<sub>IR</sub>), within 10 s are in Risk Group 2. 6.1.4 Risk Group 3 (High-Risk) Ν Lamps which exceed the limits for Risk Group 2 are Ν in Group 3. 6.2 Pulsed lamps Ν Pulse lamp criteria shall apply to a single pulse and Ν to any group of pulses within 0,25 s. A pulsed lamp shall be evaluated at the highest Ν nominal energy loading as specified by the manufacturer. The risk group determination of the lamp being Ν tested shall be made as follows: a lamp that exceeds the exposure limit shall be Ν classified as belonging to Risk Group 3 (High-Risk) for single pulsed lamps, a lamp whose weighted Ν radiant exposure or weighted radiance does is below the EL shall be classified as belonging to the Exempt Group for repetitively pulsed lamps, a lamp whose Ν weighted radiant exposure or weighted radiance dose is below the EL, shall be evaluated using the continuous wave risk criteria discussed in clause 6.1, using time averaged values of the pulsed emission
